

# 3 REASONS TO CHOOSE A NEW INSULATION SUPPLIER

**Offsite construction is smarter, faster and greener. Is the insulation solution you are currently using the right fit?**

The modular industry has long been seen as a sustainable, innovative way to build – something that doesn't quite match the characteristics of traditional insulation.

## **ROCKWOOL stone wool insulation is different in a few ways.**

### **1. Sustainable and Energy Efficient**

Made from rock, a renewable source, our insulation offers R-value stability and low VOC emissions, making it the insulation of choice for today's green builders.

### **2. Superior Performance**

It maintains incredible fire, thermal and acoustical performance between modular units. And because of its "friction fit" it won't move or sag during transportation.

### **3. Buy Direct**

The opportunity to work directly together means we can help you find the right insulation solutions and, when minimum order requirements are met, buying directly from us can lead to potential savings.

### **Let's build better together**

Contact us today and see how we're a natural fit for your modular business.
