

# LUL Intumescent Sealant

## Tools required

- Sealant gun
- Sharp knife/scissors

## Fixing and application

1. All surfaces must be clean and sound, free from dirt, grease and other contamination.
2. No priming is required for most construction substrates; however, it is recommended that a small area be tested on substrates.
3. Insert backing rod to the required depth dependent upon joint width and fire performance required.
4. Install sealant to the required depth.
5. The sealant should not be applied if the ambient temperature is below 5°C as adhesion will be impaired.
6. The sealant is fast curing approximately 15 minute tack free time. When fully cured the sealant is over paintable.

## Other installation information

### Limitations

The sealant is not recommended for submerged joints or areas exposed to high abrasion or movement.

## Health & safety

The mechanical effect of fibres in contact with skin may cause temporary itching.

Cover exposed skin  
When working in unventilated area wear disposable face mask.

Clean area using vacuum equipment.

Waste should be disposed of according to local regulations.

Rinse in cold water before washing.

Ventilate working area if possible.

Wear goggles when working overhead.
