
NBS Specification: FIREPRO® Pipewrap Roll

PRODUCT SUMMARY:

Intumescent insulation roll for fire stopping applications to pipework penetrations.

PRODUCT GENERAL DESCRIPTION:

ROCKWOOL Intumescent Pipe Wrap Roll has been designed as an additional solution to the Firepro Pipe Collars CE and Intumescent Pipe Wrap CE range, giving greater flexibility and choice. The product is tested to provide fire stopping to a variety of insulated and uninsulated plastic and metallic pipes through fire rated walls and floors.

Part of the popular ROCKWOOL FIREPRO® range, Pipe Wrap Roll is an economical solution for safeguarding pipe systems. It protects both plastic and insulated metallic pipework in both floors and walls, supplied in a 25 m long roll in a box dispenser. Another versatile product, this product is 40 mm wide and 2 mm thick and is able to fit around pipes up to 200 mm (outside diameter).

FEATURES AND BENEFITS:

- Simple to install.
- Water resistant.
- Maintenance free.
- Supplied as a 25 m long roll in box dispenser.
- Available to suit pipes up to 200 mm outside diameter.
- Comprehensively tested.
- Available from stock.

APPLICATION:

When installing pipework through fire rated walls and floors, core holes are often larger than the service to allow easy installation. These gaps formed around services provide a ready route for fire spread unless they are effectively fire stopped and sealed.

The product is intended to be wrapped around the outside diameter of combustible pipework or the outside diameter of insulation on pipework and is secured by means of the integral self-adhesive strip.

Under fire conditions, the intumescent material expands against the structure and fills the void left by the burnt-out plastic and/or insulation.

PRODUCT SPECIFICATION CLAUSE

PRODUCT REFERENCE:

FIREPRO® Pipewrap Roll

PRODUCT PROPERTIES:

Sizes: [d] 2mm x 40mm x 25m

Fire performance: [d] Fire resistance up to EI 120 (BS EN 1366-3:2009)

Density: [d] 1.3 kg/m³
